

# WHERE WE RIDE

## Analysis of bicycle commuting in American cities

REPORT ON 2017 AMERICAN COMMUNITY SURVEY DATA BY THE LEAGUE OF AMERICAN BICYCLISTS

**THE LEAGUE**  
**OF AMERICAN BICYCLISTS**

*since 1880*

## RIDING TO WORK BY THE NUMBERS

# Where is bike commuting growing in the United States?

Every year, the U.S. Census Bureau studies Americans' commuting habits, including how many people commute by bike. The League of American Bicyclists digs into this data to assess the state of bicycle commuting in cities across the country — and gives you a glimpse into how your community stacks up.

All of the data in this report is based on ONE question in the American Community Survey, shown below.

Figure 1.  
**2012 American Community Survey Questionnaire**

**31** How did this person usually get to work LAST WEEK? If this person usually used more than one method of transportation during the trip, mark (X) the box of the one used for most of the distance.

<input type="checkbox"/> Car, truck, or van	<input type="checkbox"/> Motorcycle
<input type="checkbox"/> Bus or trolley bus	<input type="checkbox"/> Bicycle
<input type="checkbox"/> Streetcar or trolley car	<input type="checkbox"/> Walked
<input type="checkbox"/> Subway or elevated	<input type="checkbox"/> Worked at home → SKIP to question 39a
<input type="checkbox"/> Railroad	<input type="checkbox"/> Other method
<input type="checkbox"/> Ferryboat	
<input type="checkbox"/> Taxicab

## REGIONAL RACE

AVERAGE MODE SHARE FOR EACH REGION'S TOP 20 CITIES

The average mode share for each region's top 20 cities paints a clear picture: The West is leading the other regions by far. While the West has 11 communities in the Top 20 nationally, there are only 3 communities in the East, 4 in the Midwest, and 2 in the South in the national Top 20.

## HOW YOU CAN ACCESS AMERICAN COMMUNITY SURVEY DATA

Here is a quick tutorial on how we access ACS data and how you can, too.

### WHERE WE GO FOR ACS DATA:

American FactFinder. We use the Advanced Search feature to find our data. The Advanced Search feature allows us to easily access the data on commuting to work because we are familiar with the topics and geographies that we want to learn about. The information provided below should allow you to use the Advanced Search feature as well.

### WHAT TOPICS DO WE USE?

Topics are displayed in a nested menu and we find commute to work data by navigating from People -> Employment -> Commuting (Journey to Work).

In some instances it can also be helpful to select a particular dataset, which is also available as a Topic, especially to look at past years or to limit results to the same type of data (e.g. 1-, 3-, or 5-year estimates). In general, the data we publish is based on 1-year estimates in order to allow us to report on trends over time. 3- and 5-year estimates are better for areas with small populations or if you are interested in particular demographic characteristics.

### WHAT GEOGRAPHIES DO WE USE?

Geographies are displayed in a nested menu and we usually report on three types of geographies – the entire United States, states and places.

### WHAT TABLES DO WE USE?

After you have selected a topic and a geography a list of relevant tables will appear.

We use the C08006 – Sex of Workers By Means of Transportation To Work – table because it provides an estimate for the number of male and female bicycle commuters in most geographies. If you are interested in only the % of commuters who commute by bike you can use the S0801 – Commuting Characteristics by Sex – table, which does not provide estimates for the number of bicycle commuters.

## ABOUT THE DATA SOURCE

The data in this report is based on estimates provided by the American Community Survey based upon answers to the above question. Each year 1 in 38 households receives an invitation to complete the ACS, you can learn more about the ACS process here. There are at least two limitations to the data: 1) it only measures how someone “usually” gets to work in the “last week” before the question was asked, and 2) it only captures the mode used for the most distance. These limitations mean that occasional bike commuters and multimodal commuters who use bikes are unlikely to be captured by ACS data.

This report relies on 2017 1-year estimates and other 1-year estimates to facilitate change-over-time comparisons. There are margins of error for every data sample, ACS included. Because of the limits of the sample size, some of the margins of error are considerable. For more specific information on those margins of error and our methodology, you may consult the American Community Survey website or contact Ken McLeod at [ken@bikeleague.org](mailto:ken@bikeleague.org).

## ABOUT THIS REPORT

This report was compiled by Ken McLeod, Policy Director for the League of American Bicyclists.
